# WINDOW COVERINGS • DRAPERIES • HARDWARE

**WALLWORKS•ACOUSTIC•ARCHITECTURAL•PRODUCTS•INC.** specializes in all types of window coverings, solar shades - motorized & manual, vertical blinds, venetian blinds, draperies, curtains, projection screens, and related hardware. The scope is virtually unlimited - residential, commercial, and institutional - from basic manually operated vertical blinds, through to the most complex, motor-assist stage curtain systems.

We source our products from a variety of manufacturers to ensure that our client's needs are perfectly matched with the proper product at the most cost competitive price.

## Blinds

Solar screens and Roller blinds, motorized and manual, from ten percent openness to full blackout screens.

Wood, Metal, Fabric and PVC blinds in both horizontal and vertical styles. Roman, Austrian, Stagecoach, and custom shading systems.

Motorization and Remote Control systems are readily available on most products.

## BEAUTY IN FABRIC

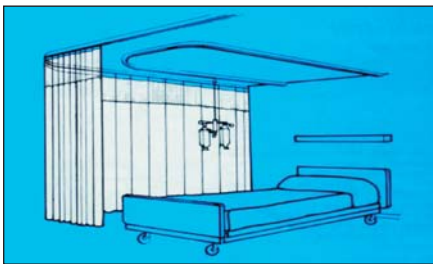

### Draperies

A full range of standard and custom treatments - from sheers to velvet and textured products. Our facilities create products to meet every client's vision.

### Stage Curtains

**Small Size to Wall Size** - stage curtains and draperies for schools, auditoriums, theatres, performance centres, and a full range of custom applications. Curtain systems are designed and built to exact site requirements using a variety of pre-engineered components, in either manual, walk-along, or motor driven styles.

### Cubicle Track and Hardware

Available from quality manufacturers, our cubicle track, hardware, and IV poles have become a standard in hospitals, nursing homes, schools, and other areas requiring an operable privacy curtain. The track and components are constructed from high grade brushed anodized aluminum with either nylon or steel bearings to ensure long life in the most demanding environments. A range of mounting options along with fabric types are available.

### Projection Screens

Our projection screens are pre-manufactured systems designed to give years of trouble-free use. The screens are available in standard sizes and can be either motorized or manually operated. They may be flush mounted or recessed into the wall or ceiling pockets - as needed to meet design requirements. Typical uses are in classrooms, courtrooms, boardrooms, meeting rooms, A/V facilities, home theatres, churches and many public event applications.
